

Practical 9

AIM : Association Rule Mining

1. Implement the Association Rule Mining algorithm (e.g., Apriori) to find frequent itemsets.
2. Generate association rules from the frequent itemsets and calculate their support and confidence.
3. Interpret and analyze the discovered association rules.

CODE :

```
import pandas as pd
import matplotlib.pyplot as plt

from mlxtend.preprocessing import TransactionEncoder
from mlxtend.frequent_patterns import apriori, association_rules

# Create market basket dataset
transactions = [
    ['Milk', 'Bread', 'Butter'],
    ['Bread', 'Butter'],
    ['Milk', 'Bread'],
    ['Milk', 'Bread', 'Eggs'],
    ['Bread', 'Eggs'],
    ['Milk', 'Butter'],
    ['Milk', 'Bread', 'Butter', 'Eggs'],
    ['Bread', 'Butter', 'Eggs'],
    ['Milk', 'Bread', 'Butter'],
    ['Milk', 'Eggs']
]

# Convert transactions into one-hot encoded format
te = TransactionEncoder()
te_array = te.fit(transactions).transform(transactions)
df = pd.DataFrame(te_array, columns=te.columns_)
print("Transaction Dataset:")
print(df)

# Find frequent itemsets
frequent_itemsets = apriori(
    df,
    min_support=0.3,
    use_colnames=True
)

print("\nFrequent Itemsets:")
print(frequent_itemsets)

# Generate association rules
rules = association_rules(
```

```
frequent_itemsets,
metric="confidence",
min_threshold=0.6
)
rules = rules[
    ['antecedents', 'consequents', 'support', 'confidence', 'lift']]
]
print("\nAssociation Rules:")
print(rules)
# Display rule interpretation
print("\nRule Interpretation:")
for _, rule in rules.iterrows():
    antecedent = ", ".join(rule['antecedents'])
    consequent = ", ".join(rule['consequents'])

    print(
        f"If customers buy [{antecedent}], "
        f"they are likely to buy [{consequent}] "
        f"(Support: {rule['support']:.2f}, "
        f"Confidence: {rule['confidence']:.2f}, "
        f"Lift: {rule['lift']:.2f})"
    )
itemsets = frequent_itemsets.copy()

itemsets["items"] = itemsets["itemsets"].apply(
    lambda x: ", ".join(list(x))
)
plt.figure(figsize=(8, 5))
plt.bar(itemsets["items"], itemsets["support"])
plt.xlabel("Itemsets")
plt.ylabel("Support")
plt.title("Support of Frequent Itemsets")
plt.xticks(rotation=45)
plt.tight_layout()
plt.show()
rules["rule"] = rules.apply(
    lambda x: ", ".join(x["antecedents"]) + " → " +
    ", ".join(x["consequents"]),
    axis=1
)
plt.figure(figsize=(8, 5))
plt.bar(rules["rule"], rules["confidence"])
plt.xlabel("Association Rules")
plt.ylabel("Confidence")
plt.title("Confidence of Association Rules")
plt.xticks(rotation=45)
plt.tight_layout()
plt.show()
```

OUTPUT :

```

PS C:\Users\DELL\OneDrive\Desktop\AI Practicals> python Practical9.py
Transaction Dataset:
  Bread  Butter  Eggs  Milk
0   True   True   False  True
